BRIGHT TV

Introduction

Bright TV has set a clear strategic objective to grow its subscriber base, increase viewer engagement, and strengthen its market position during the current financial year. In order to support this vision, a detailed analysis was conducted using subscriber profile data and viewer transaction data collected over the **first quarter of 2016 (1 January to 1 April 2016)**.

This three-month dataset provides valuable insight into how viewers interact with the platform across different **provinces, genders, age groups, races, viewing times, and channel categories**. By understanding who our viewers are, what they enjoy watching, and when they are most active, Bright TV can make smarter business decisions that improve both customer acquisition and retention.

The analysis reveals important trends such as which provinces generate the highest subscriptions, which demographics are most engaged, what content categories are performing best, and where untapped growth opportunities exist. It also highlights underperforming regions and channels that may require stronger marketing support or improved content strategies.

Ultimately, this presentation is designed to provide practical, data-driven recommendations that will help Bright TV expand its audience, increase viewing activity, optimize channel performance, and deliver a stronger entertainment experience to subscribers across South Africa.

The Sports and Music & Entertainment categories are the strongest-performing channel groups, with **SuperSport**, **ICC Cricket**, and **Channel O** ranking as the **top three best-performing channels** across all seven channel categories.

These channels show a major spike in **March**, which is linked to the **ICC Cricket World Cup** and other sporting events during that period. This may have encouraged more social gatherings and group viewing experiences around live matches.

Africa Magic, although ranked **6th in total channel views**, maintained consistently strong performance across the three-month period, with a notable increase in **March**. The lower viewership in **January** may be attributed to the start of the year, when many viewers are still adjusting to post-holiday routines and settling into the new season.

However, one constant appears to remain the **strong appeal of music content**, whether enjoyed individually or during social gatherings. **Two out of the top four highest-viewed channels** fall within the **Music & Entertainment category**, particularly channels that focus more on music than general entertainment.

This presents an opportunity to improve engagement across the remaining underperforming channels within the category, especially those targeting younger audiences. A deeper review of what this demographic is currently most interested in such as **podcasts, youth culture content, trending discussions, and digital-first entertainment**—could help drive stronger viewership.

Introduction | Channels | Gender | Age | Summary | Reset

This slide provides deeper insight into Bright TV's top 10 viewers by Province, Age Group, Gender, and Race, as well as their favourite channel categories.

The monthly trend shown below highlights spikes in viewership, particularly in **March**, suggesting that a major event or highly engaging content may have taken place during that period, driving increased audience activity.

This sheet provides insight into how many viewers have shared their social media accounts and email addresses, which will be valuable to the **Marketing Department** when planning campaigns, promotions, and direct audience engagement initiatives.

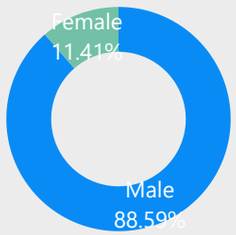
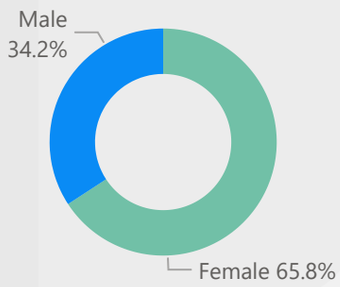
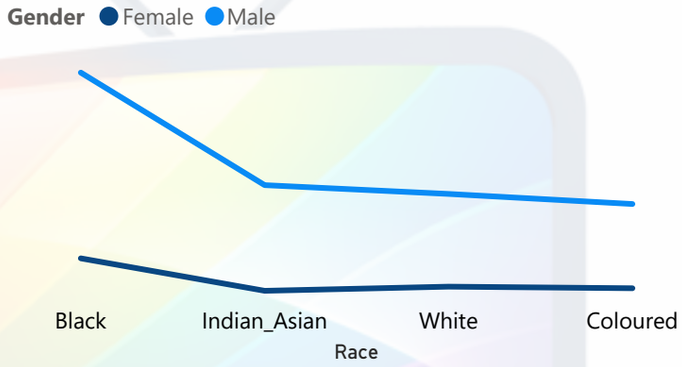
% Male vs Female

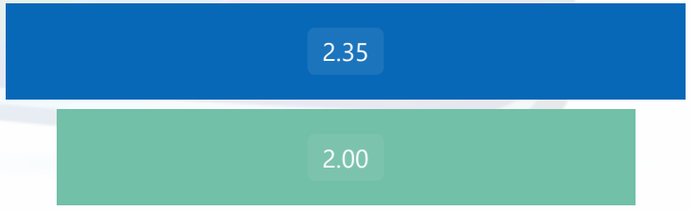


Emails





Average Screentime Per Gender



Introduction | Channels | Provides | Age | Summary

Reset

Male viewers make up more than 85% of total active viewers, while **female viewers account for just under 12% of total active viewership**, highlighting a significant gender imbalance in audience composition.

As recorded, **female viewers show a strong preference for Music and Entertainment channels** such as **Trace TV** and **Channel O**, recording a combined average screen time of **01h23**. In contrast, **male viewers predominantly prefer Sports channels** such as **SuperSport(Soccer)** and **ICC Cricket**.

Male and Female viewers also appear to show lower interest in the **Movies and Series** category. However, **both genders display a similarly high interest in Africa Magic**, making it one of the strongest **cross-gender performing channels**.
Overall, the Sports and Music & Entertainment categories appear to be performing fairly well across both genders, indicating strong and consistent audience interest.

I would recommend placing greater strategic focus on the **Movies & Series** category, as well as the **Kids channels**, to improve engagement, grow viewership, and create a more balanced content portfolio across audience segments.

All

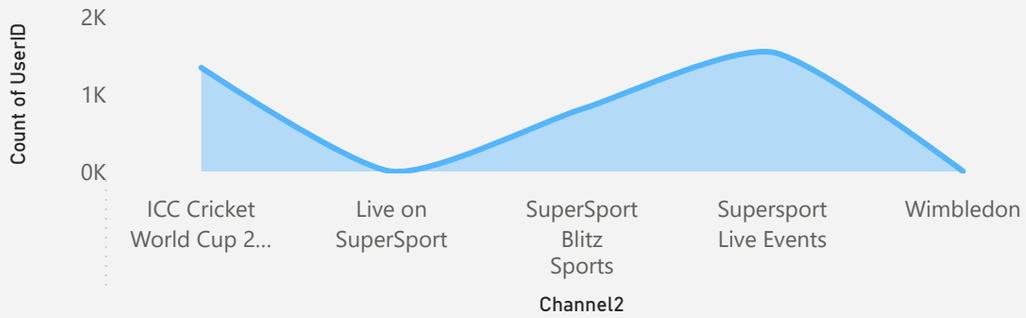
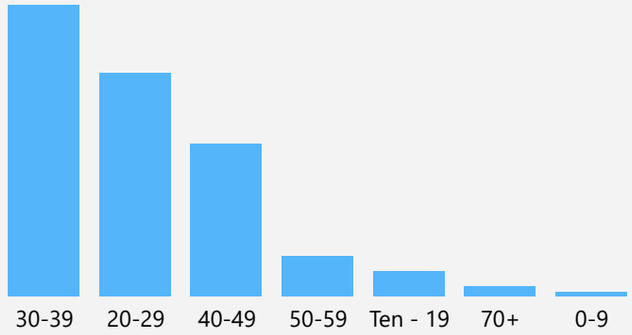
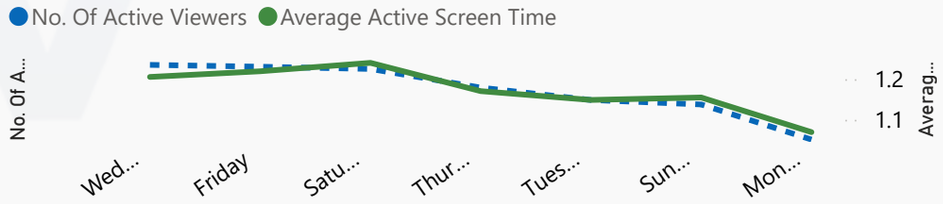
41.99% of male viewers are Black, making them the majority demographic within the male audience segment. Most of these viewers fall within the **20–39 age group**, highlighting this as the core audience range among male viewers.



2162 out of 3723 men (58%) enjoy watching predominantly sports channels, with **SuperSport Live (soccer channel)** ranking first at almost **50% sports viewership**, followed by **ICC Cricket at 44%** in second place, and **Wimbledon ranking last at a disappointing 0.1%**. This suggests that men do not particularly enjoy watching tennis compared to other sports such as football and cricket



The **30–39 age group** represents our most active viewers, followed closely by the **20–29 age group**. In contrast, the **0-9 years age group** shows the lowest activity levels.



Male viewers show a high average screen time and active viewership over the weekend, starting from **Friday to Sunday**. This could be due to the large number of sports being broadcast over this 3-day period.

Wednesday also pulls in a strong number of viewers, which may suggest that **Cricket World Cup matches or major cricket fixtures are aired on Wednesdays**, contributing to the midweek spike in viewership.

Female Viewers

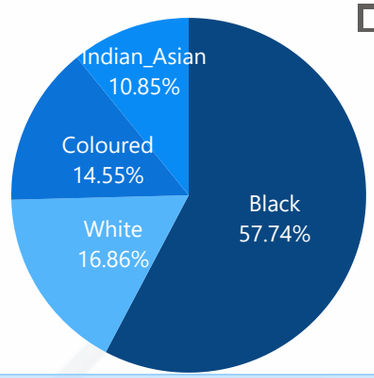
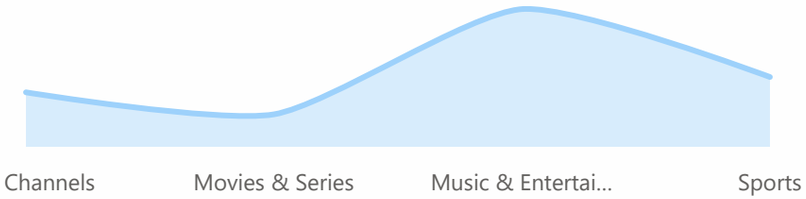
Channel Categ...: All

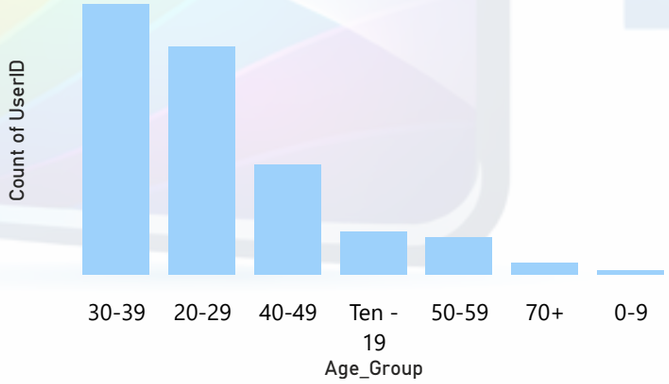
Province: All



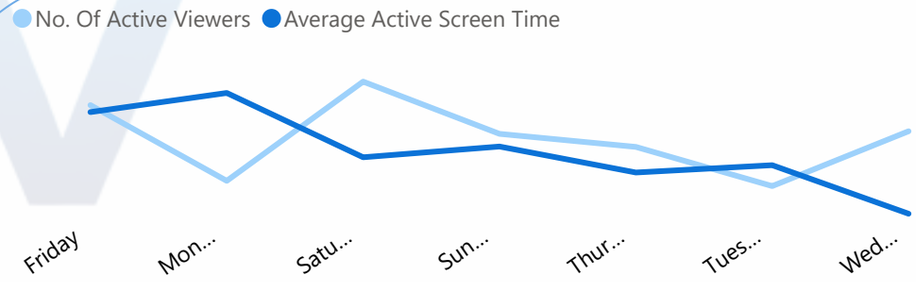
57.74% of female viewers are Black, making them the majority demographic within the female audience segment. Most of these viewers fall within the **20–39 age group**, highlighting this as the core audience range among female viewers.



Out of **488 female viewers**, **200 prefer Music and Entertainment channels**, making it the most popular category among female audiences. This is followed by **Sports channels**, with **Kids channels** ranking third.
Surprisingly, **Movies and Series channels** are the least preferred category. Within this group, **M-Net** and **kykNET** are the poorest-performing channels among female viewers. In contrast, **Africa Magic** is the standout performer, leading by a **significant margin** within the Movies and Series category, showing a much stronger preference compared to competing channels.



The **30–39 age group** represents our most active viewers, followed closely by the **20–29 age group**. In contrast, the **70+ age group** shows the lowest activity levels, with only **1 viewer recorded**.



Friday and **Saturday** record the highest number of female viewers. However, despite the larger audience, their **average screen time is lower** compared to **Monday**, which has fewer female viewers but a higher average viewing duration. This may suggest that viewers on Fridays and Saturdays tune in more frequently but for shorter periods, while Monday viewers are fewer in number yet more engaged with longer viewing sessions.

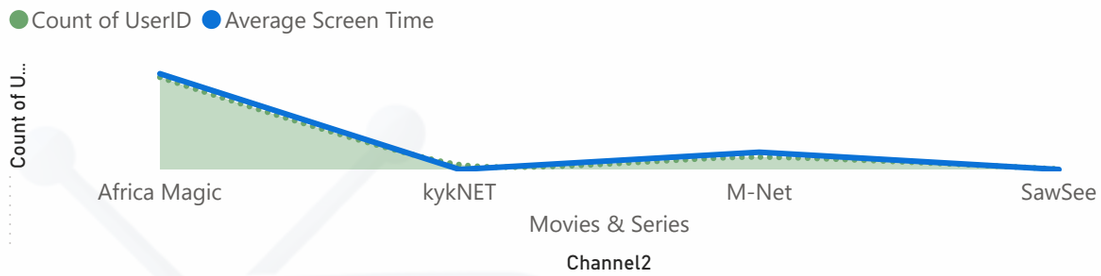
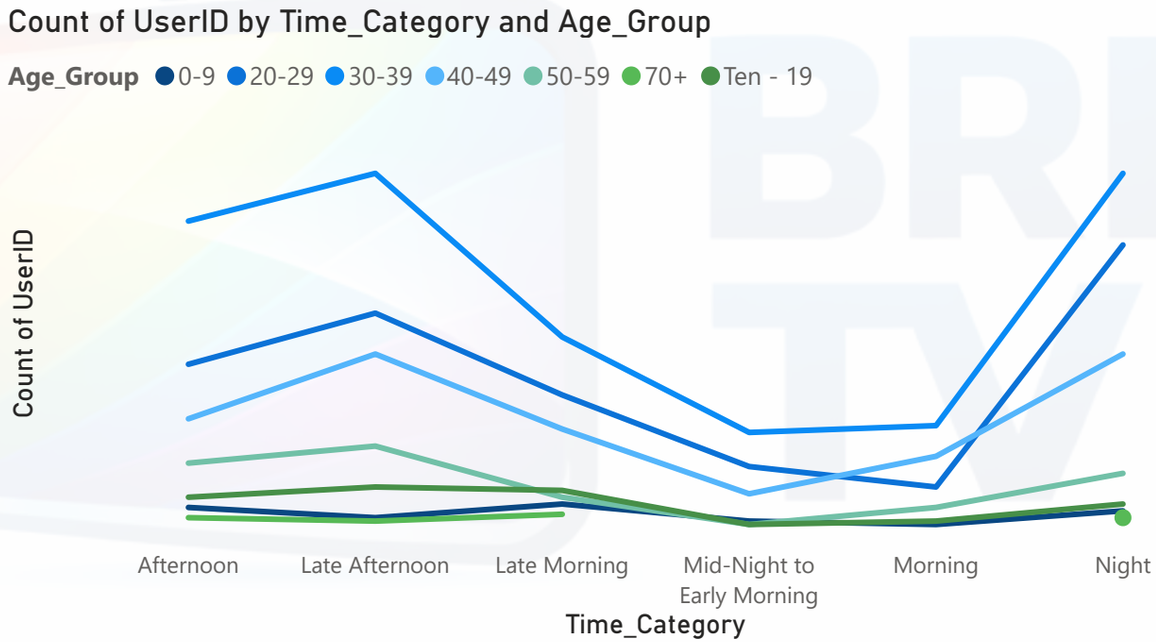
Race

All





The 20–39 age group are the highest consumers of television, making them the most valuable audience segment on the platform. They show a strong preference for **Sports** and **Music & Entertainment** channels and are most actively engaged during the **late afternoon to early evening**, between **16:10 and 19:50**. Their **top five most-viewed channels** are **SuperSport**, **ICC Cricket**, **Trace**, **Channel O**, and **Africa Magic**, highlighting a balanced interest in both live sports and entertainment content.

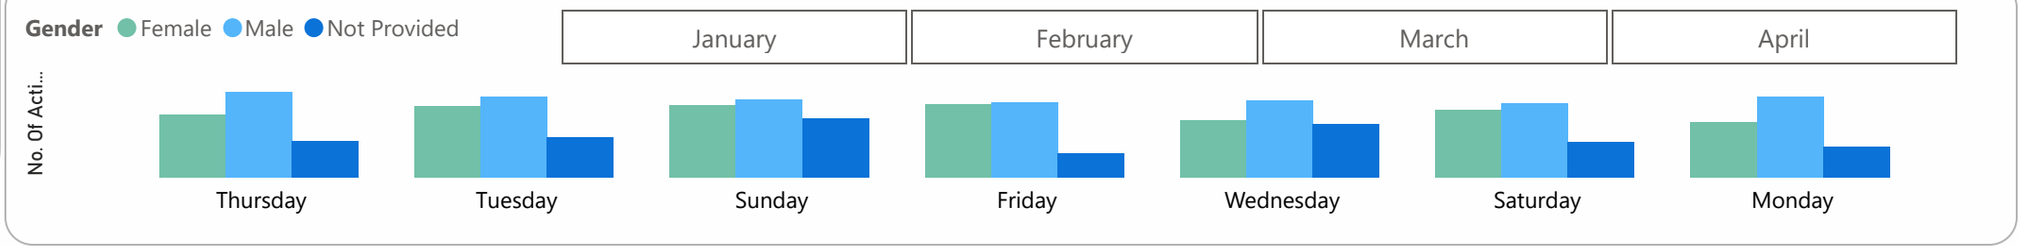
The 70+ age group records the lowest number of viewers, with a total of **57 subscribers**, indicating minimal engagement from the senior audience segment. This group appears to enjoy **Sports channels (excluding tennis)** as well as **Africa Magic**, which is mostly consumed by female viewers within the 70+ category.

They also show viewership across **Kids channels**, which may suggest co-viewing behavior with grandchildren or younger family members.

The 40–49 age group ranks in the middle among the seven age categories, representing a moderate level of overall viewership on the platform.

This segment shows the strongest interest in **Africa Magic** and **SuperSport**, making these the two leading channels within the age group.

While **Africa Magic records higher male engagement than female engagement**, this may be influenced by the lower number of female subscriptions within this category rather than a true lack of interest from female viewers.



Summary

According to the data, Bright TV has a total of 4,386 subscribers and 9,993 views across 9 provinces, with **896 email addresses** and **496 social media handles** provided by subscribers.
Gauteng Province has the highest subscriber base at 1,607, followed by the **Western Cape with 770 subscribers**, making these the strongest-performing regions in terms of audience size.
Several provinces are underperforming, particularly during months with fewer major sporting events. The lowest-performing provinces are:

1. **Northern Cape** – **82 subscribers** and **230 views**
2. **Free State** – **147 subscribers** and **292 views**
3. **North West** – **152 subscribers** and **344 views**
4. **Mpumalanga** – **271 subscribers** and **688 views**
5. **Limpopo** – **342 subscribers** and **762 views**

This may be influenced by factors such as **lower population density, geographic remoteness, or migration toward larger economic hubs** such as **Gauteng, Western Cape, and KwaZulu-Natal**.
Gender Insights

Male viewers make up the majority of Bright TV's audience, accounting for **88.5% of subscribers**, while **female viewers account for 11.41%**. Male viewers also generate the highest number of views and watch an average of **2h35** of TV compared to **2h00** for female viewers.

Most subscribers fall within the **20–39 age group**, with the most active viewing days running from **Thursday to Sunday**.

Among male viewers, **Black adult males rank highest in subscribers and views**, followed by the **Indian/Asian demographic**. The **Indian/Asian audience shows stronger interest in ICC Cricket**, while the **Black demographic predominantly watches SuperSport (soccer)**.

Black females account for more than 57% of total female subscribers, with the majority also falling within the **20–39 age group**. Their strongest interests are **Music, Movies, and Kids channels**, which may suggest co-viewing with children or family members. There are no Black children aged **0–9** directly subscribed, indicating that younger viewers may be accessing content through adult household accounts.

Viewing Behaviour

Saturday records the highest number of active viewers at 132, with an average screen time of **1h26**. However, **Monday has the highest average screen time at 1h32**, despite having the **lowest number of viewers at 92**.
This suggests that while fewer viewers watch on Mondays, those who do are more engaged and spend longer periods watching.

Recommendations

- Continue leveraging strong-performing regions such as **Gauteng** and **Western Cape**, while targeting underperforming provinces through regional campaigns.
- Strengthen data collection during registration to increase available **emails and social media contacts** for targeted marketing.
- Replicate the success of **Monday evening programming (6pm–10pm)** across other weekdays as a continued series to increase viewership.
- Introduce similar high-engagement content to **kykNET** and **M-Net** to improve performance on underperforming channels.
- Maintain strong sports content while expanding offerings for female and family audiences.
